

Essential SAFe® Toolkit

Toolkit Description

The Essential SAFe® Toolkit offers a presentation and a four-page self-diagnostic handout, which allows SPCs and stakeholders to determine if an Agile Release Train has skipped any of the ten critical success factors. After all, SAFe is a big framework, and an Enterprise may not know what's most important. The presentation and self-diagnostic work well in a meetup or other plenary session. Participants will receive a picture of SAFe and a diagnostic with their notes and some self-imposed action items.
